Snow plow

Avant snow plow is a versatile attachment for snow removal. It consists of two independently hydraulically adjustable blades. Angle of the blades is be adjusted with a switch from the driver's seat. Both blades have a spring release mechanism in the lower part of the blade to prevent any sudden stop should the blade hit an obstacle. The floating mechanism on the mounting bracket guarantees that the blade follows ground as well as possible.

The V1800 and V2400 snow plows feature:

- Vertical floating system (better than previous quadangular floating system)
- Well curved blade – moves snow efficiently to the side
- Support legs with skid shoes as standard
- Curved flat cutting edge with standard 305 mm hole distance made of high tensile, abrasion resistant wear steel

Option:

- Ice scraper edges, kit, snow plow V1800
- Ice scraper edges, kit, snow plow V2400
- Rubber edges, snow plow V1800
- Rubber edges, snow plow V2400
